HUNTEX TV-001

DISPERSANT

Huntex TV-001 is a dispersant that allows materials such as glue and dyes to easily penetrate the yarn, resulting in a more even color and high permeability. Suitable for dyeing thick fabrics, difficult to dye. Helps save fuel and dyeing chemicals.

Properties

1. Appearance: clear solution
2. Ionic calculation: anion
3. pH:
4. Main ingredients: alcohols, C12-14, ethoxylated, sulfates, sodium salts
5. Solubility: easily soluble in water

Applications

1. Surfactant has good permeability and high dispersibility.
2. Helps to absorb quickly, saving time and economy.
3. Helps fabric has high wettability and more even color.
4. Very wide pH range, can withstand pH from 2~10.

Methods used

Recommend concentrations:

Storage conditions

Preserved in dry, cool place. Avoid direct light. Store at room temperature.

Pack way

Plastic barrel: 120kg.

Attention:

1. This document is for reference only, if there is a non-conformity regarding parameters or specifications, the specification provided by the company will be applied.
2. The information in this document is given by the company's laboratory based on the actual research and experiment results, for reference only, without commitment.
3. Since factories have different equipment, technical processing processes, quantitative methods, and application environments, it is recommended that users conduct a small sample test first, based on application conditions, based on application conditions. formula and technology. If there are any errors related to the quality of the goods, the company is not responsible.
