

ABLUTEX D-600

(Dispersing Agent)

ABLUTEX D-600 is an excellent dispersing agent when Polyester fiber is dyeing with dispersing dyestuff. It helps to promote the dispersibility of dispersing dyestuff in the high temperature dyeing. Meanwhile, it can prevent the dyestuff from forming tarring on the fibers.

In the T/W one bath dyeing, **ABLUTEX D-600** can decrease the staining of dispersing dyestuff on wool.

Characteristic :

1. Appearance : Yellow transparent liquid
2. Composition : Special anionic surfactant
3. Ionic : Anionic
4. pH(1% sol'n) : 6 - 7
5. Solubility : Easily dissolve in cool water

Features :

1. Excellent dispersibility.
2. Suitable for either low temperature or high temperature dyeing.
3. Can be combined with Carrier or dispersing levelling agents.
4. When combined with cationic surfactants, an anti-precipitate agent must be used.
5. Stable in hard water, acid or alkali.

Application :

The amount of **ABLUTEX D-600** depends on the quantity of dispersing dyestuff that is used.

In general, 0.2 g/l ~ 0.7g/l is recommended.

Packing : 120 kgs
