HUNTEX DI-01

HIGH CONCENTRATED DISPERSING AGENT

HUNTEX DI-01 is an excellent dispersant . It helps to increase dispersibility of dispersing dyestuffs and prevents them from forming tarring on fabric. For T /W dyeing, it also reduces the staining of dyestuff on wool fabric

General trait

1. Appearance : Yellow transparent liquid
2. Composition : Special anionic surfactant
3. Ionicity : Anionic
4. pH : 6.0 ± 1.0 (1% aqueous solution)
5. Solubility : Soluble in cold water
6. Storage : Good stability, no effect by temperature

Characteristic

1. Low foaming, excellent dispersibility, suitable for low temperature and high temperature dyeing process.
2. It can be used together with a Carrier or a dispersing levelling agent, etc.; however, when it is used together with cationic auxiliary agent, a anti-precipitating agent is added to bath.
3. High stability with hard water, acidic or alkaline bath

Instructions

The usage amount is determined by the amount of the disperse dye. Generally recommended dosage: 0.2 g/l \rightarrow 0.7 g/l.

Packaging

120KG/barrel
