

XIAMETER® PMX-200 Silicone Fluid, 50-1,000 CS

INCI Name: Dimethicone Colorless, clear polydimethylsiloxane fluid

FEATURES

- · Ease of application and rubout
- · Ease of buffing
- · Enhances color
- High water repellency
- High compressibility
- High shearability without breakdown
- High spreadability and compatibility
- · Low environmental hazard
- Low fire hazard
- Low reactivity and vapor pressure
- Low surface energy
- · Good heat stability
- Essentially odorless, tasteless and nontoxic
- Soluble in a wide range of solvents

BENEFITS

For personal care applications

- Skin protection
- Imparts soft, velvety skin feel
- Spreads easily on both skin and hair
- De-soaping (prevents foaming during rubout)

For industrial applications

- High dielectric strength
- High damping action
- Oxidation-, chemical- and weather-resistant

COMPOSITION

- Polydimethylsiloxane polymers
- Chemical composition (CH₃)₃SiO[SiO(CH₃)₂]nSi(CH₃)

APPLICATIONS

- Active ingredient in a variety of automotive, furniture, metal and specialty polishes in paste, emulsion and solvent-based polishes and aerosols
- Various applications including cosmetic ingredient, elastomer and plastics lubricant, electrical insulating fluid, foam preventive or breaker, mechanical fluid, mold release agent, surface active agent, and solvent-based finishing and fat liquoring of leather

DESCRIPTION

XIAMETER® PMX-200 Silicone Fluid, 50-1,000 CS is a polydimethylsiloxane polymer manufactured to yield essentially linear polymers in a wide range of average kinematic viscosities.

The viscosities generally used in formulating polishes are between 100 and 30,000 cSt. To obtain optimum results, in terms of ease of application and depth of gloss, it is preferable to use a blend of a lowviscosity fluid and a high-viscosity fluid (e.g. 3 parts XIAMETER® PMX-200 Silicone Fluid 100 cSt and 1 part XIAMETER® PMX-200 Silicone Fluid 12.500 cSt). The lowviscosity silicone fluid acts as a lubricant to make polish application and rubout easier, whereas the high-viscosity silicone fluid produces a greater depth of gloss. Since these polymers are inherently water-repellent, they will cause water to bead up on a treated surface rather than penetrate the polish film.

HOW TO USE

XIAMETER® PMX-200 Silicone Fluid, 50-1,000 CS is highly soluble in organic solvents such as aliphatic and aromatic hydrocarbons, and the halocarbon propellants used in aerosols. The fluid is easily emulsified in water with standard emulsifiers and normal emulsification techniques. XIAMETER PMX-200 Silicone Fluid, 50-1,000 CS is insoluble in water and many organic products. Additive quantities as small as 0.1% may suffice where XIAMETER PMX-200 Silicone Fluid, 50-1,000 CS is to be used as a surface agent or for de-soaping creams and lotions. However, 1-10% is needed for applications such as hand creams and lotions to form a more uniform film and effective barrier.

PRODUCT SAFETY INFORMATION

XIAMETER PMX-200 Silicone Fluid, 50-1,000 CS may cause temporary eye discomfort.

¹The melt point temperature is a typical value and may vary somewhat due to molecular distribution (especially 50 cSt). If the melting point is critical to your application, then several lots should be thoroughly evaluated.

²Due to different rates of cooling, this test method may yield pour points lower than the temperature at which these fluids would melt.

³Fedors Method: R.F. Fedors, Polymer Engineering and Science, Feb. 1974.

USABLE LIFE AND STORAGE

Product should be stored at or below 60°C (140°F) in the original unopened containers. The most up-to-date shelf life information can be found on the XIAMETER Web site in the Product Detail page under Sales Specification.

LIMITATIONS

This product is neither tested nor represented as suitable for medical or pharmaceutical uses. Not intended for human injection. Not intended for food use.
